

FLEXI-CRETE CH

Transparent Waterproofing
Coating

ACRYLIC HYBRID SYSTEM

Leakages through terraces with porcelain chips or china chips is generally repaired by redoing the entire waterproofing course from the Brick Bat Coba right up to the PCC and the china chips. This process is not only time consuming but also very expensive. It is difficult to expect an improved result, with the same treatment as before.

Flexi-Crete CH has been specially formulated for such purposes. Flexi-Crete CH is a transparent pure acrylic based polymer coating designed for waterproofing of china chips terraces without breaking.

Features of FLEXI-CRETE CH

- **Excellent bonding/adhesion to china chips/mosaic tiles without scrubbing or use of primer**
- **Transparent coating, hence it maintains the beauty of china chips**
- **Excellent waterproofing properties**
- **Good abrasion resistance**
- **Resistance to UV, infrared rays, algae and fungal growth**
- **Crack bridging property up to 1 mm**
- **Ready to use and Easy to apply**
- **Cost Effective**
