

# **FLEXI**Crete SC300 ACRYLIC HYBRID SYSTEM

- for Waterproofing
- for Crack Sealing
- as Bonding Material

**F**lexi-Crete SC300 is a modified Acrylic Hybrid System for high performance waterproofing. It can also be used as crack sealing compound and as bonding material.

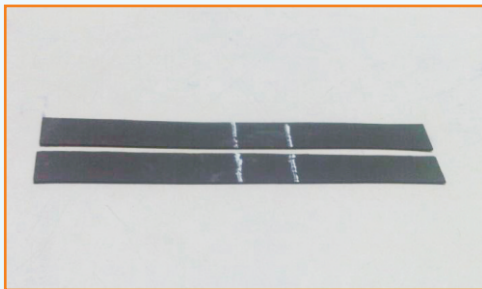

There have been numerous cases where the waterproofing coating cracks due to structural movements and weathering. Keeping in mind our goal to serve the customers better and to add life to construction, we introduce, our product, Flexi-Crete SC300.

**Flexi-Crete SC300 can be effectively used for water proofing on many areas such as -**

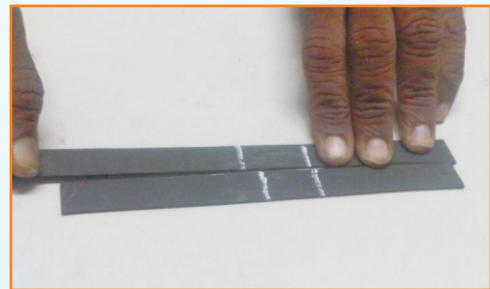

- Terraces
- Swimming Pools
- Asbestos Roofs
- Masonry Walls
- Toilets
- Siporex Blocks
- Basements
- Sloping RCC Roofs
- Metal Roofs
- Over Brick Bat Coba
- Chajja (Parapet Wall)
- On Red Bricks
- China Chips Terraces

## Flexibility of Flexi-Crete SC300

**Flexi-Crete SC300 applied on a strip of rubber.**

**No cracks are seen on the strip even after stretching.**

## Use of Flexi-Crete SC300

- **Flexi-Crete SC300 is an excellent bonding material**

- Flexi-Crete SC300 can be used to bond red brick to red brick. Hence use of sand can be avoided.
- Use of Flexi-Crete SC300 on red bricks also prevents rising dampness.
- Gypsum/POP bonds well with surfaces treated with Flexi-Crete SC300.
- Flexi-Crete SC300 is an excellent Bonding Material and bonds mirror to mirror, glass to wood, metal to metal etc.

**POLY FLEX**  
Adding life to construction

Flexi-Crete can be used on critical areas like asbestos roofs, warehouses, industrial roofs etc.

• For Crack Repair

Before Crack Repair

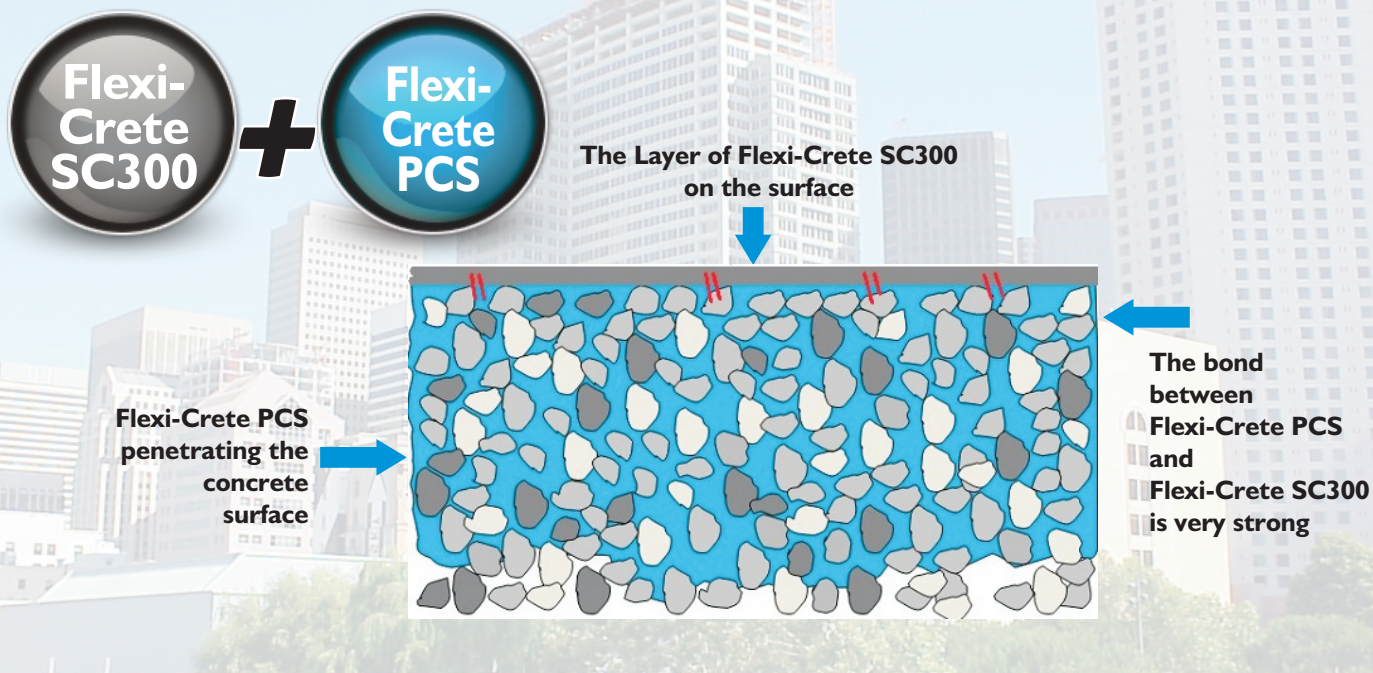

Crack Repaired Using Flexi-Crete SC300

**Penetrating Flexible Waterproofing System for extended performance**

It is highly recommended to use Flexi-Crete SC300 in conjunction with Flexi-Crete PCS to have a complete system. Flexi-Crete PCS penetrates the concrete surface up to a depth of 2-3 cms and forms a layer inside the concrete which acts as a barrier for water. So, Flexi-Crete PCS makes the concrete water tight by penetrating into the surface, and Flexi-Crete SC300 waterproofs the concrete surface from the top. Flexi-Crete SC300 is flexible, it takes care of the water leakages caused due to structural movements.

The combination of **Flexi-Crete SC300** and **Flexi-Crete PCS** is very useful for 'PT Structures'. The application method of **Flexi-Crete SC300** is user friendly.
